

## **MEDIA RELEASE – InnoTrans 2024**

Osoppo, 20<sup>th</sup> September 2024

### **FISA @ InnoTrans 2024: We look to the future by investing in the present**

InnoTrans is the leading international trade fair for transport technology, which takes place every two years in Berlin from 24 to 27 September.

At the world's leading trade fair FISA will be present again by showcasing innovation in railway seating and interiors making the company a partner for comprehensive railway interior solutions.

FISA is a leading and trustworthy family owned company by the De Simon family who founded it in 1960 with a long-standing experience in the design and manufacturing, today with three different locations in Italy.

Over the years and in particular in the last decade, thanks to cutting-edge products and a constant commercial effort, FISA has managed to establish itself not only in the domestic market but also in European and extra European ones. This international vision is allowing FISA a constant consolidation and growth that allow to be present at the leading global rolling stock manufacturers. In 2020 FISA has acquired IMET, that was one of the most important manufacturers in Italy for railway interiors and seats. After the acquisition a new facility was opened in Pescara and FISA has therefore the possibility to enlarge the products portfolio with interiors items and to increase the manufacturing capability.

FISA at InnoTrans 2024 will showcase the latest innovations with a wide range of new durable and quality products but also with a substantial and tangible focus on the environmental and social responsibility.

## **FISA Highlights @ InnoTrans 2024**

An exceptionally wide proposal like never before of new and innovative products and company news will be at a glance at the FISA stand this year:

- **LEAN Passenger Seat family at its best**
- **Unveiling GRANLUSSO Luxury Passenger Seat**
- **Absolute premiere of SLIM 800 Pneumatic Driver Seat**
- **DOLCESOGNO Sleeper Seat concept**
- **Tables and Couchettes by IMET**
- **Environmental and Social Responsiveness on show**

## ➤ **LEAN Passenger Seat family at its best**

LEAN is the railway passenger seat of the latest generation, available in any configuration required by the market to satisfy any 1<sup>st</sup> and 2<sup>nd</sup> class application from commuter to highspeed trains and is developed on the basis of the most modern design criteria in the sector such as:

- High modularity oriented to the platform concept
- Lightness and an exceptional durability due to the iron shell concept
- Reduced life cycle costs and enhanced maintainability
- Aesthetical adaptation to customized design

In addition to the available LEAN1 and LEAN2 versions that will be showcased in a wide variety of variants FISA will introduce also the innovative LEAN3 version.

## ➤ **Unveiling GRANLUSSO Luxury Passenger Seat**

The redesign of FISA's current luxury seat sought to broaden its appeal for an international audience and enable scalability for new markets and for enhancing its global attractiveness by providing "granlusso" (grand luxury).

N+P Innovation Design was tasked with this challenge by collaborating closely with FISA.

The goal is achieved by creating a future-proof and highly desirable luxury seat by optimising comfort, remote work capabilities, dining, smart features, and overall ambience to meet modern travellers' needs. The seat's well-padded structure, pronounced headrest, and high, enveloping backrest emphasise comfort and privacy, creating a personal space ideal for long journeys.

These design considerations result in a sleek, modern aesthetic with smooth surface transitions that reflect contemporary trends. This approach effectively balances comfort, privacy, and design excellence, making it well-suited for international markets and catering to passengers' evolving needs.

## ➤ **Absolute premiere of SLIM 800 Pneumatic Driver Seat**

The brand new state of the art pneumatic driver seat designed to satisfy all the most challenging requirements for the railway application without any compromises, not only in term of strenght, endurance, life cycle and compliances, but also in terms of comfort.

The apex of the comfort is achieved thanks to a self-adapting suspension based on the driver weight and optimized to reduce the vibrations dis-comfort. To achieve this combination of functionalities two independent systems are integrated: height adjustment thanks to a self-locking piston, and pneumatic self-adapting suspension. SLIM 800 is compliant with all the European railway regulations in force and designed on the most severe interpretation of the NF F-31-119 standard, applying extra loads and EN 12663.

### ➤ **DOLCESOGNO Sleeper Seat concept**

The innovative sleeper seat concept invites passengers to indulge in sweet dreams. Developed through a close collaboration between FISA and N+P Innovation Design, the sleeper seat advances passenger comfort through design. The concept reimagines the traditional train seat, introducing a unique combination of aesthetic appeal, ergonomic comfort, and functional versatility to create a superior travel experience for the evolving needs of modern passengers and results in a harmonious design with a strong visual identity and iconicity.

In addition to featuring a series of functionalities to enhance the passenger experience during the day and night the seat offers three adjustable positions: standard sitting, relaxed, and lying. Each position is carefully designed to optimise space and comfort.

Through innovative design and features, DolceSogno seat elevates passenger comfort to new heights and sets a new standard for design and functionality in sleeper seating.

### ➤ **Tables and Couchettes by IMET**

Thanks to the long-lasting expertise of FISA's sister company IMET that is now part of FISA group we can support our customer with comprehensive interior proposal in conjunction with the seating, this enables to simplify the approval and

delivery processes and determines significant positive impact on the final project performance.

FISA will showcase a wide range of bay tables, and also couchettes that are a significant part of our portfolio and a tradition in the IMET manufacturing,

exactly in the moment where we are seeing an increase of the market demand in night trains.

### ➤ **Environmental and Social Responsiveness on show**

We at FISA strongly believe that the better future will be the consequence of our actions today.

This is why we have a particular care about how we impact on the environment with our business activities therefore how we can reduce our carbon footprint with mitigations and improvements, and to how we can daily act with social responsiveness.

We will be happy to tell you how we are seriously taking in account these aspect in our management and manufacturing processes, and to explain our recent achievements and actions (UNI EN ISO 14064-1:2023 assessment, EcoVadis rating, introduction of materials obtained from recycle, recyclability of our products, and much more) all in the direction of an integrated environmental and social responsiveness.

## FISA @ InnoTrans2024 :

**InnoTrans** **InnoTrans 2024**  
24 – 27 SEPTEMBER  
BERLIN

*We look forward  
to welcoming you  
in Hall 1.1/Stand 430*

Messe Berlin

(entrance South recommended to reach FISA stand)

Opening hours:

24 - 26 September 09.00 a.m. – 06.00 p.m.

Friday, 27 September 09.00 a.m. - 04.00 p.m.
